9781848720978: A Cognitive Neuropsychological Approach to ...

This is a second edition of the highly popular volume used by clinicians and students in the assessment and intervention of aphasia. It provides both a theoretical and practical reference to cognitive neuropsychological approaches for speech-language pathologists and therapists working with people with aphasia.

A Cognitive Neuropsychological Approach to Assessment and ...

Abstract. Background: The cognitive neuropsychological approach aims to describe aphasic disorders of word production by identifying the specific cognitive process (es) that are impaired in each individual. This approach is becoming increasingly influential in the assessment, investigation, and treatment of word production difficulties in aphasia.

Cognitive neuropsychological approaches to word production ...

Cognitive neuropsychology is a branch of cognitive psychology that aims to understand how the structure and function of the brain relates to specific psychological processes. Cognitive psychology is the science that looks at how mental processes are responsible for our cognitive abilities to store and produce new memories, produce language, recognize people and objects, as well as our ability to reason and problem solve. Cognitive neuropsychology places a particular emphasis on studying the cogn

Cognitive neuropsychology - Wikipedia

1 A cognitive neuropsychological approach Theories and models An historical perspective Cognitive neuropsychology first emerged as a coherent discipline in the 1970s as a reaction to the then dominant approach in neuropsychology. This earlier approach to neuropsychology (the 'classical approach') sought to character-

(PDF) Cognitive neuropsychological approaches to word ...

Cognitive neuropsychological studies of brain-damaged patients provide strong evidence about the representation of conceptual knowledge and the relationship between conceptual knowledge and perceptual and motor processes. The cognitive neuropsychological approach ultimately seeks to evaluate models of cognitive processing through the proximate goal of

Concepts and Categories: A Cognitive Neuropsychological ...

Cognitive psychology is the scientific investigation of cognition, that is, of all mental abilities: perception, attention, learning, memory, processing of spoken and written language, thinking, reasoning and belief formation (Coltheart, 2002). It assumes that cognition can at least in principle be fully revealed by the scientific method, that is, individual components of mental processes can be identified and understood.

Cognitive neuropsychology - Scholarpedia

Two main approaches to neuropsychological assessment are typically used by clinicians: the quantitative approach, typified by standardized assessment techniques and comparison of individual performance measures against normative expectations, and the qualitative approach typified by in-depth analysis of individual performance characteristics using relatively standardized measures to elicit pathognomonic signs.

Neuropsychology - an overview | ScienceDirect Topics

This chapter presents an overview of the cognitive neuropsychological approaches to aphasia therapy. The three most widely applied aphasia therapy approaches are the communicative approach, the linguistic approach, and the cognitive approach. Cognitive impairments are described with respect to explicit psycho- and neurolinguistic models.

'The 2nd edition of A Cognitive Neuropsychological Approach to Assessment and Intervention in Aphasia is unique, focusing as it does on the therapeutic application of principled clinical research findings.

9781848721425: A Cognitive Neuropsychological Approach to ...

Cognitive neuropsychology is a relatively new development and has emerged as a distillation of the complementary approaches of both experimental and clinical neuropsychology. It seeks to understand the mind and brain by studying people who have suffered brain injury or neurological illness.

Neuropsychology - Wikipedia

Neuropsychological rehabilitation is a theoretical framework of interventions designed to improve cognitive, emotional, and psychosocial functioning due to changes in the brain. Interventions include individual- and group cognitive rehabilitation, psychotherapy, and psychoeducation. Psychosocial interventions cover areas in the personal, physical, and social context, and the interventions may include family psychotherapy and psychoeducation and vocational training.
