Installing ceramic tile over concrete requires repairing all cracks and voids in the concrete prior to the installation process. Cracks in the concrete eventually will lead to cracks in the tile because the concrete at the point of the crack won't be able to support the tile. For cracks, less than 1/8 inch, use crack suppression products.

Installing Ceramic Tile Over Different Floor Surfaces

Tiles can be installed as a floor or wall covering nearly anywhere, but they are especially useful in bathrooms and kitchens. Tiled walls can resist moisture and handle scrubbing much more readily than drywall or other materials, and so they are the ideal choice for humid bathrooms and kitchens where they will be exposed to cooking splatters.
