Ant, (family Formicidae), any of approximately 10,000 species of insects (order Hymenoptera) that are social in habit and live together in organized colonies. Ants occur worldwide but are especially common in hot climates. They range in size from about 2 to 25 mm (about 0.08 to 1 inch). Their colour is usually yellow, brown, red, or black.

ant | Facts & Habitat | Britannica

Often known as alates, flying ants are the fertile male and female ants. The purpose of these ants is to leave the nest to reproduce and start a new colony. This happens in the form of swarms where...

Flying ants: How to get rid of flying ants—Six simple...

They are social insects, which means they live in large colonies or groups. Depending on the species, ant colonies can consist of millions of ants. There are three kinds of ants in a colony: The queen, the female workers, and males. The queen and the males have wings, while the workers don't have wings.

Ants: Fun Facts about Ants & Ant Information for Kids

Ants will do just about anything to get the sugary secretions of sap-sucking insects, such as aphids or leafhoppers. To keep the honeydew in close supply, some ants herd aphids, carrying the soft-bodied pests from plant to plant. Leafhoppers sometimes take advantage of this nurturing tendency in ants and leave their young to be raised by the ants.

10 Fascinating Facts About Ants—ThoughtCo

The slave-making ants are specialized to parasitize a single species or a group of related species, and they are often close relatives to their hosts, which is typical for social parasites. The slave-makers may either be permanent social parasites (thus depending on enslaved ants throughout their whole lives) or facultative slave-makers.

Slave-making ant—Wikipedia

Bees, wasps and ants all form part of the insect order Hymenoptera, a large and diverse group made up of 'membrane-winged' insects.

Common UK insect identification—Woodland Trust

Flying ants usually take off when the weather is warm, humid, and wind speeds are low, allowing for a smoother flight. Flying Ant Day usually takes place in July or August, and is when the queen...

20 Safe Ways to Kill Ants in Your Home Without Toxic Chemicals

Ants are social insects; they live in colonies that consist mainly of workers – sterile, wingless females. In July and August, winged males and females emerge for mating flights. They are about twice the size of the workers.

Black garden ant | Facts About Black Ants—The RSPB

While both carpenter ants and termites can be very destructive to homes, the two species are different because termites eat the wood in which they tunnel, but carpenter ants only nest in it; they do not eat it. So another difference of carpenter ants is the frass (wood dust, soil, and insect parts) that is often found beneath openings to the nest.

What to Do About Flying Ants in Your Home

What insects eat ants? Some common insects that regularly eat ants are spiders, flies, beetles, wasps, butterflies, and antlions. Surprisingly, some types of ants feed exclusively on other ants species. For instance, army ants are known to consume the larvae of some other ant species, and some fire ants feed on other fire ants.
