The book presents key perspectives on teaching and learning science in India. It offers adaptive expertise to teachers and educators through a pedagogic content knowledge (PCK) approach. Using cases and episodes from Indian science classrooms to contextualise ideas and practices, the volume discusses the nature of science, and aspects of assessments and evaluations for both process skills and conceptual understanding of the subject. It examines the significance of science education at school level and focuses on meaningful learning and

development of scientific and technological aptitude. The chapters deal with topics from physics, chemistry and biology at the middle- and secondary-school levels, and are designed to equip student-teachers with theoretical and practical knowledge abilities about science, science learning and the abilities to teach these topics along with teaching. The book draws extensively from research on science education and teacher education and shifts away from knowledge transmission to the active process of constructivist teaching-learning practices. The authors use illustrative examples to highlight flexible planning for inclusive classrooms. Based on studies on cognitive and developmental psychology, pedagogical content knowledge of science, socio-cultural

For everybody teaching chemistry or becoming a chemistry teacher, the authors provide a practice-oriented overview with numerous examples from current chemical education, including experiments, models and exercises as well as relevant results from research on learning and teaching. With their proven concept, the authors cover classical topics of chemical education as well as modern topics such as every-day-life chemistry, student's misconceptions, the use of media or the challenges of motivation. This is the completely revised and updated English edition of a highly successful German title.

One of the central features in current educational reforms is a focus on learning outcomes. Many countries

have established or revised standards to describe what teachers are supposed to teach and students are expected to learn. More recently, the emphasis has shifted to considerations of how standards can be operationalized in order to make the outcomes of educational efforts more tangible. This book is the result of a symposium held in Kiel, that was arranged by two science education groups, one at the IPN (Leibniz-Institute for Science and Mathematics Education at the University of Kiel) in Germany and the other at the University of York, UK. The seminar brought together renowned experts from 12 countries with different notions of the nature and quality of learning outcomes. The aim was to clarify central conceptions and approaches for a better understanding among the

international science education community. The book is divided into five parts. In Part A, the organizers set the scene, describing the rationale for arranging the symposium. Part B provides a broad overview about different approaches, challenges, and pitfalls on the road to the clarification of meaningful and fruitful learning outcomes. The set of papers in Part C provides deep insights into different, although comparable approaches which aim to frame, to assess, and to promote learning and learning outcomes in science education. Smaller projects are presented as well as broad, coordinated national programs. The papers in Part D outline the individual historical development from different national perspectives, reflecting the deficits and problems that led to current reforms. Finally, a
