Following are answers to the practice questions: 14 m/s, 26 degrees. Momentum is conserved in this collision. In fact, momentum is conserved in both the x and y directions, which means the following are true: $p_{fx} = p_{ox}$. $p_{fy} = p_{oy}$. The original momentum in the x direction was. $p_{fx} = p_{ox} = m_1 v_{o1} \cos 40 \text{ degrees} + m_2 v_{o2}$. Momentum is conserved in the x direction, so

To check for elasticity, we need to calculate the kinetic energy both before and after the collision. Before the collision, the kinetic energy is $(2)(2)^2 + (2)(3)^2 = 13$. After, the kinetic energy is $(2)(2)^2 + (2)(1)^2 = 5$. Since the kinetic energies are not equal, the collision is inelastic.

Problems remain hidden in organizations for a number of reasons, including fear, organizational complexity, gatekeepers who insulate leaders from problems that are coming up, and finally, an overemphasis on formal analysis in place of intuition and observation. This book lays out the key skills and capabilities required to ensure that problems do not remain hidden in your organization. It explains how leaders can become effective problem finders, unearthing problems before they destroy an organization. The book explains how leaders can become an anthropologist, going out and observe how employees, customers, and suppliers actually behave. It then goes on to present how they can circumvent the gatekeepers, so they can go directly to the source to see and hear
