govern the systems engineering process and how those concepts fit the Department of Defense acquisition process. Chapter 1 establishes the basic concept and introduces terms that will be used throughout the book. The second chapter goes through a typical acquisition life cycle showing how systems engineering supports acquisition decision making.

SYSTEMS ENGINEERING FUNDAMENTALS

DoD weapon systems are increasingly an integration of discretely developed and very sophisticated subsystems and components. While a system comprises a war fighting capability to a combatant commander, from a sustainment perspective, it is comprised of separately designed and integrated subsystems such as propulsion, electronics, or fire control.
