"Technical communication is the process of making and sharing ideas and information in the workplace as well as the set of applications such as letters, emails, instructions, reports, proposals, websites, and blogs that comprise the documents you write...Specifically, technical writing involves communicating complex information to a specific audience who will use it to accomplish some goal or task in a manner that is accurate, useful, and clear. Whether you write an email to your professor or supervisor, develop a presentation or report, design a sales flyer, or create a web page, you are a technical communicator." (Chapter 1)

Dear non-believer, I like that when the infuriating alarm clock yells "Wake up, there's a challenge waiting for you today", rousing you from a pleasant dream, you do not smash it. You simply slap the off button and head to work. Let's establish this: Your boss doesn't care how you view your alarm clock. He or she only cares that you show up at work on time with a smile on your face. Saying, "Scientists have figured it out ... There is no god; and there is no need for one," is common nowadays to counter Christians, Muslims and Jews, who turn up saying, "Wake up, atheist. There's a challenge waiting for you in the afterlife." Unfortunately, that response can be illogical: Ask any scientist, "Is the scientific community sure there is no creator?" and the likely answer will be, "No, we are only about 99% sure. Anyone could be wrong, as Richard Dawkins said." The common response makes you a 1% gambler and frames you as defending personal conclusions instead of facts. It makes sense to defend statements such as that DNA decides biological characteristics such as eye and skin color and that chimps are our biological cousins, because these are facts. However, defending the statement "There is no creator"; after reading Adam's story has nothing to do with defending facts. The only fact in the Adam story is that if we have a creator, he paid no attention to science while introducing himself to our ancestors. Instead, he preferred to focus on teaching them how to overcome the challenges of life. There are atheists who believe in science, but do not use it as the base of their arguments, they say "We don't care when there is no evidence." Be careful using this kind of reasoning. It is true that sometimes the problem is that there is no evidence. But sometimes, the problem is that there is no desire to see the evidence. There is a story about a police officer who released a murderer despite having video of him committing the crime. What was the officer's rationale for dismissing the evidence you might ask. "It was made by the victim"; Maybe the difference is little between the police officer and atheists who label the books, in which the Abraham story and the Mary story are written, as man-made rather than possible evidence or product of divine intervention. The troubling situation, if you'll allow me to call it so, is easy to solve. Do you remember what we established about your boss? Think about it ... The creator, if he does exist, should not be less understanding or less open-minded than your boss. So what if you view todays Christians, Muslims and Jews as infuriating alarm clocks? What you should care about is leaving this world with a wide, confident smile similar to the smile of a confident employee when he or she says, "Good morning"; to their colleagues and boss. I am aware that you don't deem books worth reading, unless their titles are such as 'God Is Not Great'; or 'God Is So Bad', but I kindly ask you to make an exception. I want to draw that confident smile on your face. Considering the ignorance of contemporary Christians, Muslims and Jews, nothing should be easier than drawing that smile. Always remember that there is 1% probability that a creator does exist. It is not good form for you to look disoriented if the Creator says to you, "Okay, numb-skull, I appreciate your refusal to be a Christian, a Muslim or a Jew, but tell me: Why did you think I was less understanding and open-minded than your boss? Have I not made from an atheist a role model for you? What more did you want from me? Also, tell me why you have released me although I left in your hands books in which I admitted committing "crimes" against your kind?"

Los enfoques de Pago por Desempeño (PPD) se han expandido con rapidez en los países de ingresos bajos y medios en todo el mundo. El número de países ha crecido de 3 en 2006 a 32 en 2013. Los esquemas de PPD están floreciendo y crean una demanda considerable de asistencia técnica a fin de ejecutar estas reformas sanitarias en una forma racional y responsable. Tres pioneros internacionales del PPD se han unido para dar una respuesta a esta demanda internacional. Ellos son: György Fritsche, MD, MSc (Banco Mundial, Washington); Robert Soeters, MD, PhD (SINA Health, La Haya); y Bruno Meessen, MA, PhD (Instituto de Medicina Tropical, Amberes). Su trabajo vuelca sus 40 años de experiencia total en el diseño e implementación de esquemas de PPD en un manual de PPD de vanguardia, dirigido a implementadores y hacedores de políticas. Se unió al equipo Godelieve van Heteren (MD; Erasmus University Rotterdam Global Health Initiative (RGHI)), quien realizó la co-edición a fin de darle al manual consistencia, contenido y formato. Cedric Ndizeye, MD, MPH (MSH, Ruanda), redactó las partes principales del capítulo sobre desarrollo de competencias, y Caryn Bredenkamp, PhD (Banco Mundial, Washington) contribuyó con el capítulo 5 sobre equidad. Actualmente, existe poco conocimiento entre muchos de los que ejecutan reformas sanitarias sobre cómo implementar proyectos piloto de pago por desempeño y cómo ampliarlos a nivel nacional en forma inteligente. En un contexto de gran demanda de un diseño sólido y experiencia en la implementación, y dada la rápida expansión de los programas de Financiación Basada en Resultados, existe una necesidad urgente de desarrollar competencias para el diseño e implementación de programas de FBR. Hasta el momento, ha habido poco interés en combinar las enseñanzas de esas experiencias en un solo volumen y, más aún, en un formato que sirva como guía a los implementadores. Este manual es una respuesta a las preguntas más urgentes sobre programas de FBR del lado de la oferta, del cual el PPD es parte. Este manual estará disponible en una versión on-line, que será actualizada en forma regular, y una versión impresa en 3 idiomas (inglés, francés y español).

This book is intended for anyone whose job involves writing formal documentation. It is aimed at non-native speakers of English, but should also be of use for native speakers who have no training in technical writing. Technical writing is a skill that you can learn and this book outlines some simple ideas for writing clear documentation that will reflect well on your company, its image and its brand. The book has four parts: Structure and Content: Through examples, you will learn best practices in writing the various sections of a manual and what content to include. Clear Unambiguous English: You will learn how to write short clear sentences and paragraphs whose meaning will be immediately clear to the reader. Layout and Order Information: Here you will find guidelines on style issues, e.g., headings, bullets, punctuation and capitalization. Typical Grammar and Vocabulary Mistakes: This section is divided alphabetically and covers grammatical and vocabulary issues that are typical of user manuals.

Users want manuals that are easy to read, with short sentences, simple words, and unambiguous instructions. Unfortunately, writing plain language is much more difficult than writing overblown instructions that only an expert can understand. Writing complex texts is simple-writing simple texts is complex. This book shows you how to write simple user assistance rather than complex user annoyance. As it's a book about stating your message clearly, it also states its own messages clearly. It's free of boring theory and free of highbrow grammar terms and gives you clear recommendations and catchy examples that you can easily remember and apply to your own work. Topics covered: General technical writing principles that make your texts plain, simple, and easy to understand; On the topic level: Rules for writing "Concept topics," "Task topics," and "Reference topics."; On the paragraph level: Rules for writing the standard elements that form a topic, such as headings, subheadings, procedures, lists, tables, warnings, notes, tips, examples, cross-references, and links; On the sentence level: Rules for building plain and unambiguous sentences; On the word level: Recommendations for using simple words; Spelling and punctuation FAQ; Grammar and word choice FAQ; Standard terms and phrases. Audience: technical writers, developers, marketing professionals, product managers.

Addresses the statistical, mathematical, and computational aspects of the construction of packages and analysis of variance (ANOVA) programs. Includes a disk at the back of the book that contains all program codes in four languages, APL, BASIC, C, and FORTRAN. Presents illustrations of the dual space geometry for all designs, including confounded designs.

CRITICAL THINKING: A USER'S MANUAL offers an innovative skill-based approach to critical thinking that provides step-by-step tools for examining arguments. Users build a complete skill set by recognizing, analyzing, diagramming, and evaluating arguments. Later chapters encourage application of the basic skills to categorical, truth-functional, analogical and inductive, and causal arguments as well as fallacies. Exercises throughout

the book engage readers in active learning, integrate writing as part of the critical thinking process, and emphasize skill transference. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
