This Guide is based upon personal observations of freshwater crustacean zooplankton (Cladocera and Copepoda) found in Sudbury Region lakes, located in Northeastern Ontario, Canada. The purpose was not to provide thorough details on all aspects of zooplankton taxonomy, nor to present identification keys since these already exist (refer to Section 4).

An online taxonomic guide. This Guide is designed both for those needing help in identifying phytoplankton species, as well as experienced taxonomists. It offers several avenues to find a particular species of interest. Once your species of interest is located, you will be taken to an Organism page that lists taxonomic details about that species. Clicking on a photo on that page will navigate you to a full size image and collection data for that photograph.

Phytoplankton Identification Gallery. htoplankton are the unsung heroes of our planet. They are the primary producers that form the base of the oceanic food chain, serving as the first link in the conversion of sunlight and nutrients into biomass. They provide food for everything from krill to whales, and they are responsible for much of the oxygen present in our atmosphere (up to 50%).

This paper considers the structure of freshwater phytoplankton assemblages and promotes a scheme of 'vegetation recognition', based upon the functional associations of species represented in the plankton. These groups are often polyphyletic, recognizing commonly shared adaptive features, rather than common phylogeny, to be the key ecological ...

In a changing world, phytoplankton communities face a large variety of challenges including altered light regimes. These alterations are caused by more pronounced stratification due to rising temperatures, enhanced eutrophication, and browning of lakes. Community responses toward these effects can emerge as alterations in physiology, biomass, biochemical composition, or diversity.
