## British Birds | Bird Identification Guides | Bird Spot

When using a bird book to help identify something you've seen, bear in mind that real birds do not often look exactly like the pictures. Every bird is slightly different. Most books illustrate birds at one or two times of year, but birds replace their feathers at regular intervals and so are often in an 'intermediate' stage not illustrated.

## Bird Identification Tips | What Bird Is It? - The RSPB

### BBC Blogs - Springwatch - Wing Tips: Identifying our birds ...

Hawks include the bird-eating hawks such as the sparrowhawk, with broad, rounded wings and long, slender tails. Buzzards are mostly larger, longer-winged, substantial birds, which use broad wings for soaring. Eagles are much larger, with deep, arched, sharply-hooked bills, long, strong, curved claws. There are many more species outside Europe.

### Birds of Prey | Kites, Hawks and Eagles - The RSPB

Birds of prey can be difficult to tell apart, particularly when you can only catch a fleeting glimpse of them or see a distant silhouette in the sky. British Birds Of Prey Identification Guides Find out more about some of the most common British birds of prey including identifying features, nesting and feeding habits and take a listen to their calls:

### British Birds Of Prey | Identification Guides | Bird Spot

Hawks and eagles: medium to very large; hooked bills; rounded or broad wings; sharp talons; tend to soar. Falcons: small to medium-sized; tapered wings and tails; fast and agile; often hover. Owls: small to large; rounded heads; small, hooked bills; forward-facing eyes; mainly nocturnal.

### Identify birds of prey | The Wildlife Trusts

Key information. The knot is a dumpy, short-legged, stocky wading bird. In winter, it is grey above and white below - in summer the chest, belly and face are brick-red. In flight, it shows a pale rump and a faint wing-stripe. It forms huge flocks in winter which wheel and turn in flight, flashing their pale underwings as they twist and turn.

### Knot Bird Facts | Calidris Canutus - The RSPB

When observing a bird in flight note first its shape: its outline or silhouette. Notice the shape of the wings and tail, and note shape of the bill, length of the neck, and if the feet trail behind the tail. A little anatomy: the wing. The wing of birds is analogous to the arm of humans.

### Greg in San Diego: Tutorial: How to Identify Birds in Flight

Body plans and flight styles are helpful in identifying similarly-sized birds of prey at a distance. Is the bird large and flying flat, holding its wings in a vee and tilting as it flies, or M-shaped? If you are in northeastern Iowa, the first is probably an eagle, the second is probably a turkey vulture, and the third is probably an osprey.

### Raptor Resource Project: Bald Eagle and Bird of Prey Cams

Raptors are on the move. Now is a great time to get out and see the birds of prey as they migrate south for the winter (click here for a list of 10 awesome places to watch the spectacle). Seeing the birds on the wing is thrilling—particularly when there are large numbers of them—but it can also be frustrating to try and identify them at various angles and distances.
