Bibliometrics and altmetrics are increasingly becoming the focus of interest in the context of research evaluation. The Handbook Bibliometrics provides a comprehensive introduction to quantifying scientific output in addition to a historical derivation, individual indicators, institutions, application perspectives and data bases. Furthermore, application scenarios, training and qualification on bibliometrics and their implications are considered.

ISI Master Journal List July 2014

' Represents the culmination of an 18-month-long project that aims to be the definitive review of this important topic. Accompanied by a scholarly literature review, some new analysis, and a wealth of evidence and insight... the report is a tour de force; a once-in-a-generation opportunity to take stock. ' – Dr Steven Hill, Head of Policy, HEFCE, LSE Impact of Social Sciences Blog ' A must-read if you are interested in having a deeper understanding of research culture, management issues and the range of information we have on this field. It should be disseminated and discussed within institutions, disciplines and other sites of research collaboration. ' – Dr Meera Sabaratnam, Lecturer in International Relations at the School of Oriental and African Studies, University of London, LSE Impact of Social Sciences Blog Metrics evoke a mixed reaction from the research community. A commitment to using data and evidence to inform decisions makes many of us sympathetic, even enthusiastic, about the prospect of granular, real-time analysis of our own activities. Yet we only have to look around us at the blunt use of metrics to be reminded of the pitfalls. Metrics hold real power: they are constitutive of values, identities and livelihoods. How to exercise that power to positive ends is the focus of this book. Using extensive evidence-gathering, analysis and consultation, the authors take a thorough look at potential uses and limitations of research metrics and indicators. They explore the use of metrics across different disciplines, assess their potential contribution to the development of research excellence and impact and consider the changing ways in which universities are using quantitative indicators in their management systems. Finally, they consider the negative or unintended effects of metrics on various aspects of research culture. Including an updated introduction from James Wilsdon, the book proposes a framework for responsible metrics and makes a series of targeted recommendations to show how responsible metrics can be applied in research management, by funders, and in the next cycle of the Research Excellence Framework. The metric tide is certainly rising. Unlike King Canute, we have the agency and opportunity – and in this book, a serious body of evidence – to influence how it washes through higher education and research.

An incisive narrative history of the Islamic State, from the 2005 master plan to reestablish the Caliphate to its quest for Final Victory in 2020 Given how quickly its operations have achieved global impact, it may seem that the Islamic State materialized suddenly. In fact, al-Qaeda ' s operations chief, Sayf al-Adl, devised a seven-stage plan for jihadis to conquer the world by 2020 that included reestablishing the Caliphate in Syria between 2013 and 2016. Despite a massive schism between the Islamic State and al-Qaeda, al-Adl ' s plan has proved remarkably prescient. In summer 2014, ISIS declared itself the Caliphate after capturing Mosul, Iraq—part of stage five in al-Adl ' s plan. Drawing on large troves of recently declassified documents captured from the Islamic State and its predecessors, counterterrorism expert Brian Fishman tells the story of this organization ' s complex and largely hidden past—and what the master plan suggests about its future. Only by understanding the Islamic State ' s full history—and the strategy that drove it—can we understand the contradictions that may ultimately tear it apart.

Hailed as providing new insights into scholarly communication, bibliometrics, or the quantification of bibliographic data, is a set of methods central to the study of formal communication channels. In this volume prestigious international writers, thinkers and commentators in this vital new area of research address questions such as: what are the interdisciplinary contributions of bibliometric methods to scholarly communication (from past to future); What is the relationship between methods currently being applied to this study; Can and should these methods be brought together in a common paradigm?

A conceptual view of citation indexing; A historical view of citation indexing; The design and production of a citation index; The application of citation indexing to the patent literature; The citation index as a search tool; A science management tool; Citation analysis as a method of historical research into science; Mapping the structure of science; Citation analysis of scientific journals; Perspective on citation analysis of scientists.
