The management of the unstable lie in late pregnancy. J Obstet Gynaecol Br Commonw 1969; 76:713. Wilmkink FA, Hukkelhoven CW, Lunshof S, et al. Neonatal outcome following elective cesarean section beyond 37 weeks of gestation: a 7-year retrospective analysis of a national registry.

UpToDate

The fetal sacrum does need to be maintained anteriorly, which can be done by holding the fetal pelvis. However, occasionally the baby does not deliver spontaneously, and some specific manoeuvres are required: Flexing the fetal knees to enable delivery of the legs. Using Lovsett's manoeuvre to rotate the body and deliver the shoulders.

Breech Presentation - Risk Factors - Management - TeachMeObGyn

Women with an unstable lie (transverse, oblique) at 37-38 weeks gestation should be advised that admission to hospital for inpatient observation until the lie stabilizes or delivery is achieved is the preferred option. If a woman declines admission, both the woman and her partner should be advised to contact their

Clinical Practice Guide - Cord Prolapse - HSE.ie

With transverse, oblique or unstable lie, elective admission to hospital after 37+0 weeks of gestation should be discussed and women in the community should be advised to present urgently if there are signs of labour or suspicion of membrane rupture. Women with non-cephalic presentations and preterm prelabour rupture of membranes should be

Green-top Guideline No. 50 - RCOG

Suggestions for Unstable Lie. The main thing I suggest for unstable lie is the same as for the persistent breech. Seven (7) Forward-leaning Inversions (FLI) in one 24 hour period, about 15 minutes to 2 hours apart. Do not set an alarm to wake yourself, sleep is paramount! Do not do FLI after eating or during heartburn.

When a Person Is Told They Have an Unstable Lie - Spinning ...

The surgeon may be able to rotate the fetus through the wall of the uterus once the abdominal wall has been opened. Otherwise, a transverse uterine incision is needed to gain access to a fetal pole. Internal podalic version is no longer attempted. Transverse lie is associated with a risk of cord prolapse of up to 20%.

Malpresentations and Malpositions Information | Patient

No fetal anomaly incompatible with vaginal birth. 2, 3 Absence of fetal or maternal compromise Continuous fetal heart rate monitoring during labour. 3 Spontaneous onset of labour. Note: For criteria and management of a vaginal breech birth see sections in this document: Breech – Vaginal Birth Management and Breech Vaginal Birth QRG

Abnormalities of Lie / Presentation

When a fetus with an abnormal lie or malpresentation presents under these circumstances, hospital care is best managed within the confines of labor and delivery, where fetal surveillance can be maintained on a continual basis.

Abnormal Fetal Lie and Presentation | GLOHM

aetiology and treatment of the oblique, transverse and unstable lie of the foetus with particular reference to antenatal care W. G. Macgregor F.R.C.S., F.R.C.O.G. Reader in Obstetrics and Gynaecology, University of London, Consultant Obstetrician and Gynaecologist, Hammersmith Hospital

AETIOLOGY AND TREATMENT OF THE OBLIQUE, TRANSVERSE AND ...

Management. Caesarean section is the safest procedure even if the baby is dead. A classical or low vertical incision in the uterus facilitates extraction of the foetus as a breech in such a condition. Any other manipulations will lead eventually to rupture uterus so they are contraindicated. UNSTABLE LIE. Definition

Shoulder Presentation and unstable lie - D. El-Mowafi

A: Unstable lie means that the baby is moving and changing its position. Average maturity in your report also corresponds to your dates, which means that the baby is growing well in accordance to...

What does my ultrasound report indicate?

Management of breech delivery. If the presentation is known beforehand, then delivery should be scheduled in a healthcare facility, where surgical intervention, if indicated, can be performed. After 37 weeks of gestation, ... Transverse Lie. In this type of fetal presentation, the fetal head lies transversely across the maternal pelvis, with ...

fifty-three cases of unstable lie were encountered earlier in pregnancy, but underwent correction TABLE 1 Incidence of unstable lie Total number of hospital deliveries 9495 Transverse and oblique lie in labour and at delivery 106 Total foetal loss 14 Maternal deaths 1 before term. There seems therefore to be one chance in three than an unstable ...

Management of Unstable Lie Fetus - PDFdrive

Algorithms in Obstetrics and Gynaecology presents the core knowledge needed to tackle all situations in obstetrics and gynaecology, in a structured fashion. All algorithms are designed to support rapid decision making in the most clinically relevant situations to minimise the risks of a poor outcome. A range of clinical problems are covered from common non-life-threatening emergencies such as hyperemesis in pregnancy, to life-threatening acute events such as ectopic pregnancy, acute fetal distress or maternal collapse. Each topic is presented as either an algorithm, a care pathway, or table of key information and has been carefully structured to ensure a logical progression of thought to aid anticipation, early diagnosis and prompt and appropriate management. Accompanying key learning points highlight the essential information from the topic. Based on current national guidelines and clinical evidence, the algorithms and care pathways can be used as a reliable and practical resource for day to day practice in obstetrics and gynaecology.

The emphasis of the manual is on rapid assessment and decision making. The clinical action steps are based on clinical assessment with limited reliance on laboratory or other tests and most are possible in a variety of clinical settings.

This book is based on the classic 'Holland and Brews Manual of Obstetrics'. The fourth edition is comprehensive with clear concepts, concrete up-to-date knowledge and student friendly "one stop obstetrics textbook". Basic principles, investigations, management options as well as the recent advances have all been explained in a simple and systematic manner. The information given is evidence based and as per international guidelines and management protocols. Salient Features Every chapter has been thoroughly revised and updated with recent advances in Obstetrics The book has been made comprehensive with addition of new content, algorithms, figures, drug regimens and tables Several new chapters, Decision Making in Obstetrics, Management of Post-caesarean Pregnancy, Obstetric History Taking, Obstetric Examination, Labour Care – Ready Reckoner added Chapters on Specimens and Instruments in Obstetrics have been added to aid students to prepare for viva voce The format is modified to help not only students in obstetrics but also the practicing obstetricians Points to Remember added with each chapter highlighting important information

Extended matching questions (EMQs) were introduced to the Part 2 MRCOG examination paper in September 2006. This book provides a detailed guide for candidates preparing for the examination, and includes: • background and introduction to the question format • advice on answering EMQs • worked examples of specimen questions, including an explanation of the answer, guidance on how to tackle each question and advice on how to avoid mistakes • two mock examination papers, with answers provided.

This is the fifth edition of a popular, highly readable primer in obstetrics and gynaecology. It has been thoroughly updated and reconfigured to key into the new undergraduate curriculum n 0&G devised by the Royal College of Obstetrics and Gynaecology. Highly illustrated throughout. Essential information points at the end of chapters. Case histories throughout. Practical procedures boxes throughout. Alert (warnings or advice) and tick (guidance or definitions) boxes throughout. New editor: Professor Sabaratnam Arulkumaran. Now a multi-authored text written by eminent experts from across the speciality. Book entirely restructured to reflect the national undergraduate curriculum in obstetrics and gynaecology. Two new appendices: Principles of Perioperative Care and Governance, Audit and Research. Over 100 self-assessment MCQs at the end of the book.

Management of Unstable Lie Fetus - PDFdrive

Obstetric emergencies are unplanned and often unanticipated. Management requires a clear understanding of the life-saving and damage-limiting treatments that can be implemented.

Nowadays, nobody can imagine practicing obstetrics without using obstetrical ultrasound. Working in the prenatal diagnosis field requires dedication, patience, skills, experience, caution, and empathy. The concept of this book was guided by the desire to provide some help to the ultrasound operators. On a daily basis, they are confronted with the challenging task of ruling out or suspecting/confirming the diagnosis of fetal anomalies, either structural or chromosomal. The chapters of this book contain objective and exhaustive updated reviews of the pertinent literature, so that the reader would have a wide reference basis on each subject. Yet, many authors scan the fetus themselves or are directly involved with managing pregnancies with structural malformations or chromosomal anomalies. They kindly shared their personal experience and lessons learned over the years. This book is beneficial for all the professionals working in the prenatal diagnosis.

This book is a practical guide to obstetrics and gynaecology for trainees preparing for the MRCOG Part 2 examination. Beginning with a brief overview of general principles, the rest of the book is clearing set into two sections – Obstetrics, and Gynaecology. Each of these sections is further divided to discuss the diagnosis and management of numerous disorders within each sub-specialty. The book has been written in accordance with the current MRCOG Part 2 curriculum and includes the very latest RCOG Green-top guidelines and NICE guidelines. Additionally, this comprehensive textbook features the latest statistics on maternal and perinatal mortality in the UK, published by MBRRACE-UK in December 2016. Key Points Practical guide to obstetrics and gynaecology for MRCOG Part 2 candidates Written in accordance with current MRCOG Part 2 curriculum Includes latest RCOG Green-top guidelines and NICE guidelines Features latest statistics on maternal and perinatal mortality from MBRRACE-UK
