Acces PDF Mean Median Mode Range Math

13, 13, 13, 13, 14, 14, 16, 18, 21.
13, 13, 13, 13, 14, 14, 16, 18, 21.
So the median is 14. The mode is the number that is repeated more often than any other, so 13 is the mode. The largest value in the list is 21, and the smallest is 13, so the range is $21 - 13 = 8$. mean: 15. median: 14.

~~Mean, Median, Mode, and Range~~ | Purplemath

Find the mean, median, mode and range of the following data set:

9,4,17,4,7,8,14 Finding the mean:

First add the numbers up:

$9+4+17+4+7+8+14 = 63$ Then divide 63 by the total number of data points, 7, and you get 9. The mean is 9. Finding the median:

First put the numbers in order: 4,

4, 7, 8, 9, 14, 17 The middle

number is 8. There for the median is 8. Finding the mode:

~~Kids Math: Mean, Median, Mode and Range~~

The range is the easiest to find, Range = highest value minus lowest value. This gives us RANGE = $99 - 13 = 86$. Example 4: Find the mean, median, mode and range for the following list of values. This is an interesting example because the elements in the set now contain zeroes, a positive, and negative numbers.

~~Mean, Median, Mode and Range— Online Math Learning~~

The median of a data set is the number that is the middle value of the set. It's easy to find the median if you first put the numbers in order from least to greatest. In this tutorial, see how to find the median of a data set, and see what to do if there are two middle values! How Do You Find the Mode of a Data Set?

Getting Started with Mean, Median, Mode and Range Problems. The worksheets on this page require kids to calculate the mean, median, range and mode for small sets of numbers, all of which are easy enough to add up on paper without the aid of a calculator. These are great practice tools for introducing concepts like mean or median because the sets of numbers are small enough to focus on the techniques to compute these statistics without getting bogged down in the calculations themselves.

So what we do is we take the mean of these two numbers and we pick that as the median. So if you take 23 plus 25 divided by 2, that's 48 over 2, which is equal to 24. So even though 24 isn't one of these numbers, the median is 24.

~~Mean, median, & mode example
(video) | Khan Academy~~

The range of a data set in statistics is the difference between the largest and the smallest values. While range does have different meanings within different areas of statistics and mathematics, this is its most basic definition, and is what is used by the provided calculator. Using the same example:

$$2, 10, 21, 23, 23, 38, 38 \quad 38 - 2 = 36$$
