the analysis and
comparison of two
models – a “full
model” with all of the
possible paths
included and a
“reduced model”
which has some of
the paths deleted,

Path analysis is a straightforward extension of multiple regression. Its aim is to provide estimates of the magnitude and significance of hypothesised causal connections between sets of variables. This

is best explained by considering a path diagram.

PSY6003: Path
analysis

Path analysis is a form of multiple regression statistical analysis that is used to evaluate causal models by examining the relationships between a dependent
