Geneticists and molecular biologists have been interested in quantifying genes and

their products for many years and for various reasons (Bishop, 1974). Early molecular methods were based on molecular hybridization, and were devised shortly after Marmur and Doty (1961) first showed that denaturation of the double helix could be reversed - that the process of molecular reassociation was exquisitely sequence dependent. Gillespie and Spiegelman (1965) developed a way of using the method to titrate the number of copies of a probe within a target sequence in which the target sequence was fixed to a membrane support prior to hybridization with the probe -

typically a RNA. Thus, this was a precursor to many of the methods still in use, and indeed under development, today. Early examples of the application of these methods included the measurement of the copy numbers in gene families such as the ribosomal genes and the immunoglobulin family. Amplification of genes in tumors and in response to drug treatment was discovered by this method. In the same period, methods were invented for estimating gene numbers based on the kinetics of the reassociation process - the so-called Cot analysis. This method, which exploits the dependence of the rate of

In an age of unlimited data and research, why do more than 50 percent of new products fail to meet expectations? It boils down to a lack of customer insight. The revolutionary theory behind Jobs to Be Done argues that people purchase products and services to solve a specific problem or fulfill a distinct need. For example, people don't shovel down Rocky Road and Buttered Pecan ice cream because

they want nuts, marshmallows, and gobs of frozen goodness, but because they feel the need to celebrate, indulge, or bond with friends and family. But how can this simple concept be best utilized for your company's success? This groundbreaking book, with its Jobs Roadmap, is intended to remake how companies approach their market. Successful innovation doesn't begin with a brainstorming session--it starts with the customer. Learn how to put that into practice by discovering how to:

- Gather valuable customer insights.
- Turn those insights into new product ideas.
- Test and iterate until you find success.
