## *Labs Darwinian Snails*

Lab (Workbook): Darwinian Snails. This lab and accompanying workbook lead students through simulated experiments investigate the assumptions behind natural selection using an experimental system involving green crabs preying on periwinkle snail. Students are able to "violate" each assumption in turn to explore whether evolution by natural selection still occurs.

## Virtual Labs Post-Lab

Discussion Questions 1) What generates variation in a population's gene pool? a) By mutations! Mistakes in protein synthesis processes, etc. Also, crossing over leads to new combination of genes/variations. 2) Why is variation in a gene pool essential to evolution? a) Species have an easier time adapting to an environment if there is variation.
