The Iridescence of Birds : Patricia MacLachlan : 9781596439481

Iridescence is the phenomenon of certain surfaces that appear to gradually change color as the angle of view or the angle of illumination changes. Examples of iridescence include soap bubbles, feathers, butterfly wings and seashell nacre, as well as certain minerals. It is often created by structural coloration. Pearlescence is a related effect where some or all of the reflected light is white, where iridescent effects produce only other colours. The term pearlescent is used to describe certain

Iridescent Birds | The Garden and Patio Home Guide

Iridescence describes a color that isn't any one color. You see it in soap bubbles, bird feathers, butterflies – even in reptiles, like this common dotted garden skink in Sri Lanka. You also may see it in the occasional sports car paint job. Photo Credits: Karin Kjærnsmo
