"Virtual ChemLab: Organic Chemistry Laboratories" is a collection of realistic simulations of organic synthesis and organic qualitative analysis. In these laboratories, students are put into a virtual environment where they are free to make the choices and decisions that they would confront in an actual instructional laboratory setting and, in turn, experience the resulting consequences. The general features of the organic simulation include the ability to synthesize products; workup reaction mixtures and perform extractions; use nuclear magnetic resonance (NMR), infrared spectroscopy (IRS, and thin-layer chromatography (TLC) as analytical tools; purify products by distillation or recrystallization; and perform qualitative analysis experiments on unknowns using functional group tests with actual video depicting the results of the tests. The simulation allows for over 1,000,000 outcomes for synthesis experiments and can assign over 300 different qualitative analysis unknowns.

Use Virtual ChemLab to do almost any lab or procedure that can be performed in a real lab. Choose from 30 exciting pre-built labs or design your own--in less time, and with no clean-up, safety, or equipment issues. Find realistic lab environments for Inorganic Chemistry, Calorimetry, Titrations, Gases, and Quantum Chemistry.

The four volumes present more than 460 reviewed contributed and invited papers and span the whole range of computational science, from foundational issues in computer science and algorithmic mathematics to advanced applications in virtually all application fields making use of computational techniques. These proceedings give a unique account of recent results in the field.

For students, DIY hobbyists, and science buffs, who can no longer get real chemistry sets, this one-of-a-kind guide explains how to set up and use a home chemistry lab, with step-by-step instructions for conducting experiments in basic chemistry -- not just to make pretty colors and stinky smells, but to learn how to do real lab work: Purify alcohol by distillation Produce hydrogen and oxygen gas by electrolysis Smelt metallic copper from copper ore you make yourself Analyze the makeup of seawater, bone, and other common substances Synthesize oil of wintergreen from aspirin and rayon fiber from paper Perform forensics tests for fingerprints, blood, drugs, and poisons and much more From the 1930s through the 1970s, chemistry sets were among the most popular Christmas gifts, selling in the millions. But two decades ago, real chemistry sets began to disappear as manufacturers and retailers became concerned about liability. .em>The Illustrated Guide to Home Chemistry Experiments steps up to the plate with lessons on how to equip your home chemistry lab, master laboratory skills, and work safely in your lab. The bulk of this book consists of 17 hands-on chapters that include multiple laboratory sessions on the following topics: Separating Mixtures Solubility and Solutions Colligative Properties of Solutions Introduction to Chemical Reactions & Stoichiometry Reduction-Oxidation (Redox) Reactions Acid-Base Chemistry Chemical Kinetics Chemical Equilibrium and Le Chatelier's Principle Gas Chemistry Thermochemistry and Calorimetry Electrochemistry Photochemistry Colloids and Suspensions Qualitative Analysis Quantitative Analysis Synthesis of Useful Compounds Forensic Chemistry With plenty of full-color illustrations and photos, Illustrated Guide to Home Chemistry Experiments offers introductory level sessions suitable for a middle school or first-year high school chemistry laboratory course, and more advanced sessions suitable for students who intend to take the College Board Advanced Placement (AP) Chemistry exam. A student who completes all of the laboratories in this book will have done the equivalent of two full years of high school chemistry lab work or a first-year college general chemistry laboratory course. This hands-on introduction to real chemistry -- using real equipment, real chemicals, and real quantitative experiments -- is ideal for the many thousands of young people and adults who want to experience the magic of chemistry.
