large-scale syrup producer seeking to make a profitable business from maple, birch, and walnut sap. This comprehensive work incorporates valuable information on ecological forest management, value-added products, and the most up-to-date techniques on sap collection and processing. It is, most importantly, a guide to an integrated sugaring operation, interconnected to the whole-farm system, woodland, and community. Farrell documents the untapped potential of American forests and shows how sugaring can turn a substantial profit for farmers while providing tremendous enjoyment and satisfaction. Michael Farrell, sugarmaker and director of the Uihlein Forest at Cornell University, offers information on setting up and maintaining a viable sugaring business by incorporating the wisdom of traditional sugarmaking with the value of modern technology (such as reverse-osmosis machines and vacuum tubing). He gives a balanced view of the industry while offering a realistic picture of how modern technology can be beneficial, from both an economic and an environmental perspective. Within these pages, readers will find if syrup production is right for them (and on what scale), determine how to find trees for tapping, learn the essentials of sap collection, the art and science of sugarmaking, and how to build community through syrup production. There are many more unique aspects to this book that set it apart from anything else on the market, including: - A focus on maple as a local, sustainably produced and healthy alternative to corn syrup and other highly processed and artificial sweeteners; - The health benefits of sap and syrup in North America and throughout the world; - Attention to the questions of organic certification, sugarhouse registration, and the new international grading
