They reject that life-giving message and pursue their own path to a god they can control by their own efforts. The existence of so many religions is a testimony to humanity's rejection of the one true God. Mankind has replaced Him with gods that are more to their liking. In a sense, all religions do lead to God, but not in the way most people think.

Almost every country in the world has sophisticated systems to prevent banking crises. Yet such crises--and the massive financial and social damage they can cause--remain common throughout the world. Does deposit insurance encourage depositors and bankers to take excessive risks? Are banking regulations poorly designed? Or are banking regulators incompetent? Jean-Charles Rochet, one of the world's leading authorities on banking regulation, argues that the answer in each case is "no." In *Why Are There So Many Banking Crises?*, he makes the case that, although many banking crises are precipitated by financial deregulation and globalization, political interference often causes--and almost always exacerbates--banking crises. If, for example, political authorities are allowed to pressure banking regulators into bailing out banks that should be allowed to fail, then regulation will lack credibility and market discipline won't work. Only by insuring the independence of banking regulators, Rochet says, can market forces work and banking crises be prevented and minimized. In this important collection of essays, Rochet examines the causes of banking crises around the world in recent decades, focusing on the lender of last resort; prudential regulation and the management of risk; and solvency regulations. His proposals for reforms that could limit the frequency and severity of banking crises should interest a wide range of academic economists and those working for central and private banks and financial services authorities.

If computers reduce everything to the binary number system of 0s and 1s, then why are there so many programming languages? Two men in 1980s Pietermaritzburg are drawn to the same woman, Abby, quickly becoming each other's nemesis in a political climate where resistance of any kind often invited executions, factional clashes, clandestine activity, treachery and entrapment. Abby unwittingly becomes the object of a dangerous obsession as the archenemies, not content with displacing the other in her affections, play to ensure the other's annihilation, none foreseeing the theatre their deadly encounter would be staged, culminating in a clash that potentially destabilizes the entire region and, for one of them, leaves a lasting legacy of shattered hopes, broken dreams, a life destroyed.

This book is a valuable resource that connects prior reading experiences in the world to new ones. Young readers' natural curiosity of the world, paired with interactive, engaging strategies, make learning fun. Beginning readers will enjoy the hands-on learning.

The history of humanity has only just begun. The Neolithic Revolution may have endowed us with unparalleled means of communication, subsistence, and knowledge acquisition. However, it is clear in today's world that inequality, power hierarchies, and violence persist on a greater scale than ever before. In these two lectures, delivered to the large number of young people who gathered in the Lycée Henri-IV and the École nationale des Beaux-Arts in Paris to hear him speak, Alain Badiou argues that we are still firmly rooted in the Neolithic era, subjugated by the structures of political power -- property, family, and state. He calls for a second revolution to restore to each person their freedom and agency. Through an analysis of recent attempts at political organisation, including the Arab Spring, Occupy, and Nuit debout, Badiou shows that progress toward this goal will only be achieved through an emphasis on sameness, not difference. This rallying cry to the young from one of France's most renowned radical thinkers will appeal to the many who read and follow his work, and to the millions of young people around the world who are passionate about redressing the deeply entrenched inequalities and divisions in our societies today.

Look around your office. Turn on the TV. Incompetent leadership is everywhere, and there's no denying that most of these leaders are men. In this timely and provocative book, Tomas Chamorro-Premuzic asks two powerful questions: Why is it so easy for incompetent men to become leaders? And why is it so hard for competent people--especially competent women--to advance? Marshaling decades of rigorous research, Chamorro-Premuzic points out that although men make up a majority of leaders, they underperform when compared with female leaders. In fact, most organizations equate leadership potential with a handful of destructive personality traits, like overconfidence and narcissism. In other words, these traits may help someone get selected for a leadership role, but they backfire once the person has the job. When competent women--and men who don't fit the stereotype--are unfairly overlooked, we all suffer the consequences. The result is a deeply flawed system that rewards arrogance rather than humility, and loudness rather than wisdom. There is a better way. With clarity and verve, Chamorro-Premuzic shows us what it really takes to lead and how new systems and processes can help us put the right people in charge.

On a hot August morning in 1892 in a town in the Italian province of Avellino, in secrecy in the cellar under the house of a prominent family, a baby girl, unplanned and unwanted, was born. Her adoptive parents named her Alessandra. Her birthright remained a secret for years to come. In *Without the One There Can Be No Other* The Many Forces of Destiny, author Alessandra L. Matteo tells a fictionalized account of her paternal grandmothers life beginning from her birth in Italy, her travels to America for an arranged marriage to an Italian man, her life in the United States overcoming illiteracy, and the formation of her own family. This memoir narrates how Alessandra didnt live a life of privilege or the entitlement of wealth, which was her birthright. Hers was one of hard work, sacrifice, love of family, and the need to keep everyone she loved near. This memoir shares the story of a woman who had an indomitable spirit, was intelligent, courageous, determined, tenderhearted, hard-working, loving, and generous as well as flawed, imperfect, quick-tempered, stubborn, willful and, at times, childish in her expectations of those she loved. Though her life was beset with tragedy, denial, and rejection, Alessandra was an extraordinary woman determined, courageous, and blessed with a pioneer spirit.

Makes the proposal that the only possible solution to the 'mind-brain' problem is that each nerve cell is conscious separately and that we have no other 'global' consciousness. This book explores the idea in an accessible way, while attempting to address fundamental issues of cell membrane biology and the nature of the observer.
